                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid molecule, designated CD2000 which encodes a polypeptide containing immunoglobulin [1g] and 1g-like domains and SLMA associated protein (SAP) motifis. CD2000 DNA and protein is useful for treating disorder such as immune proliferative disorders. Immune disorders (e.g. carcinoma), viral infection, autoimmune disorders (e.g., arthritis, multiple solerosis, Grave s disease, and Hashimoto's disease), T cell disorder (e.g. arquired immune deficiency syndrome (AIDS)), inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), inflammatory disorders (e.g. rheumator) asthma and osteoarthritis, allergic inflammatory disorders (e.g. sthma and osteoarthritis), allergic inflammatory disorders (e.g. spetum and osteoarthritis), allergic inflammatory disorders (e.g. spetum and not contain and observation and insembly contained broaders, hepatic circulatory disorders, hepatitis, cirrhosis, cachexia, jaundice, hepatic circulatory disorders, hepatitis, cirrhosis, coute myeloid leukaemia, haemophilia and anaemia. CD2000 DNA is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 DNA
                                                                                                                                                                                                                                                                                                                                                                       like domains and SLAM associated protein, termed CD2000 or CD2001, useful for treating immune, inflammatory, or hepatic circulatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            284

Human soft tissue sarcoma-upregulated DNA - SEQ ID 1885.

26-AUG-2004 (first entry)

```
relative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, GPR-32, CD83, CD84, CD89, escotomin R BY55, serotomin R2C, GFR63, histamine R.H4, GFR5, EPO-R, PSG-1, PSG-3, PSG-6, PSG-9, PDB-4d, and PI-1-related kinase to the subject, such that treatment occurs. The methods characterized by a too-vigorous or weak effector T cell or regulatory T cell response to antigens associated with the condition, such as in an allergic response, an autoimmune disorder, a virsal infection, a microbial infection, a parasitic infection or a tumour. The present sequence represents a DNA encoding a human leukocyte differentiation CD84 antigen, preferentially expressed in regulatory T cells.
benefits from modulating the balance of regulatory T cell function

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for detecting soft tissue sarcome which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Barly detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1067 BP; 315 A; 264 C; 238 G; 250 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a nucleic acid molecule designated Gene 164 from the human cDNA clone HSAWF26 (deposited as clone ATCC 97901 and ATCC 209049) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin C portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAM7731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LyshrgTyrasnLeuGlnIleTyrArgArgLeuGlyLysProLysIleThrGlnSerLeu 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-AUG-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          22-AUG-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-AUG-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-AUG-1
```

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA contess also given in the specification, encoded by one of 309 cDNA condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrowascular disorders e.g. cardiac arrest, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders c.g. corneal infection. The polypeptides can also be used to aid wound healther an epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The culture of primary tissues, to regenerate tissues and in chemotaxis. The carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a cDNA derived from a gene encoding one of the novel human secreted proteins of the invention. Note: This sequence did not form part of the printed specification, but was constant and processed to the printed specification, but was Ruben SM, Rosen CA, Fischer CL, Soppet DP, Carter KC; dednarkb DR, Endress GA, Yu G, Ni J, Feng P, Young PE, Greene JM; Ferrie AM, Duan R, Hu J, Florence KA, Olsen HS, Ebner R, Brewer LA; Moore PA, Shi Y, Lafleur DW, Li Y, Zeng Z, Kyaw H; New isolated human secreted protein for diagnosing, preventing, treating or ameliorating medical conditions and used as a food additive or seqdata.uspto.gov/sequence.html?DocID=6420526B1 Example 1; SEQ ID NO 174; 129pp; English. WPI; 2002-634796/68. P-PSDB; ABG95343. preservative.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polynucleotide for producing human secreted proteins are useful for preventing, treating, ameliorating or disgnosing medical conditions such as hyperproliferative disorders, blood-related disorders (e.g. haemophilia or thrombocytopaenia) cumunodeficiencies (e.g. haemophilia or thrombocytopaenia), autoimmune disorders (e.g. disorders (e.g. sizher) thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, multiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), viral or bacterial or fungal infections (e.g. AIDS or sepsis), renal disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina chectoris, carebral ischaemia or congenital heart defects), respiratory disorders, neurological disorders (e.g. Alzheimer's disease). The patkinson's disease), and inflammations (e.g. Crohn's disease). The colymocleotide or polypeptide may also be used as vaccine adjuvants.

ACD82641-ACD82950 encode human secreted proteins or their fragments.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New genes and its encoded prostate cancer antigen proteins, useful for preventing, treating, ameliorating or diagnosing e.g. prostate cancers, thymic hypoplasia, multiple sclerosis, AIDS, angina pectoris or cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ruben SM, Rosen CA, Soppet DR, Carter KC, Bednarik DP;

```

```
The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ruben SM, Rosen CA, Soppet DR, Carter KC, Bednarik DP;

  85\%
polypeptide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medical condition e.g., cancer. The sequence encodes a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                      413

Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with aberrant expression and activity.

claim 3; SEQ ID NO 174; 142pp; English

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPS) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoletic disorders, candocrine disorders, diseases of the immune system, inflammatory in disorders and many others. Full details of disorders that may be prevented, diagnosed and/or treated by the above methods are given in the specification. The nucleic acid molecules may be used to produce their proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the created by the above methods are given in the proteins. The nucleic acids in samples, and therefore which can antigens in the production of antibodies and activity. The anti-SP cantibodies against the proteins and antigonists may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by represents a human secreted protein cDNA). The present sequence

```
The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked intantile hypogammaglobulinemia, polyasaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, Burkitt's hypogammaglobulinemia of infancy, Burkitt's hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's hypersensitivity, rheumatoid arthritis, autoimmune mediated heemolytic anaemia, myasthenia gravis, hypodrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypodrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypodrenocorticism, glomerulonephritis, or anaemia, condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromsome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               407
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   227
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            287
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       288 TATGAACGGATACATGCCTTAGGTCCGAACTACAATCTGGTCATTAGCGATCTGAGGATG 347
                                                                                                                                                                                                                                             New PRO polypeptide, useful for diagnosing and treating a B cell related disorder, e.g. Burkitt's lymphoma, rheumatoid arthritis, autoimmune mediated hemolytic anemia, myasthenia gravis or ankylosing spondylltis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

The invention relates to a novel isolated nucleic acid and the PRO
CO polypeptide encoded by it. A protein of the invention has
continical manuatory, antiarthritite, antirhemmatic, immunosuppressive,
costeopathic, antidiabetic, dermaclogical, antipsociatic, antiallergic,
costeopathic, antidiabetic, and respiratory activity. A polymucleotide
contiasthmatic, hepatotropic, and respiratory activity. A polymucleotide
cof the invention may have a use in gene therapy. The PRO polypeptide, its
caponist, antagonist, or antibody that specifically binds to the
caponist invention may have a use in gene therapy. The PRO polypeptide, its
caponist invention may have a use in gene therapy. The PRO polypeptide, its
caponist interactions, recurrenting an immune related disorder such as
constructed in service in tracting an immune related disorder such as
constructed interactions, rheumatorid arthritis, ostecarthritis,
cidopathic inflammatory myopathy, Sjogren's syndrome, systemic
chrombocytopenia, thyroidiseae of the central or peripheral nervous
capstem, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
captem, idiopathic demyelinating polyneuropathy, a hepatobiliary
captem, idiopathic sor autoimmune chronic active hepatitis, primary
chisease, infectious or autoimmune chronic active hepatitis, primary
chisease, infectious or autoimmune chronic active hepatitis,
chistory cirrhosis, granulomatous hepatitis, sclerosing cholangitis,

                                                                                                                                                                                                                                                                                                                                       Diagnosing susceptibility to schizophrenia (SCZ) in a patient, by determining presence or absence of an allele of a linked polymorphic marker present on chromosome 1q22, were the marker is linked to a variant form of the SCZ gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was isolated using the method of the invention as the SCZ gene. This sequence has been previously identified as CD84, GenBank Accession No. NM 008874. CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. The proteins encoded by this sequence may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method of diagnosing susceptibility to schizophrenia in a patient. The method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker in chromosome 1422 and is linked to a gene (SCZ) having a variant form associated with a phenotype of schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LysAspSerGluIlePheThrValAsnGlyIleLeuGlyGluSerValThrPheProVal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AsnileGlnGluProArgGlnValLysIleIleAlaTrpThrSerlysThrSerValAla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TyrValThrProGlyAspSerGluThrAlaProValValThrValThrHisArgAsnTyr

Sequence 3326

```
The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcome in the manable sarcoma, possibly via gene therapy or vaccine production. The nucleic sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated bNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

The invention relates to a novel isolated polypeptide (NOVX) comprising emature form of any of the 37 amino acid sequences fully defined in the pecification. A polypeptide of the invention has antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, anorectic, virucide, antibacterial, fungicide, protozoacide, nootropic, neuroprotective, antiparkinsonian, anticonvulsant, osteopathic, antiarthritic, antinflammatory, dermatological, antiasthmatic, and antilipaemic activity. A polymucheotide of the invention may have a use in gene therapy. The polypeptides, nucleic acid molecules and antibodies
                                                                                                                                                                                                                                                                                                    antiatreriosclerotic; anorectic; virucide; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antibarkinsonian; dermiconvulsant; osteopenhic; antiathritic; antihiflammatory; dermatcological; antiasthmatic; antilipaemic; gene therapy; fibroblast growth factor receptor 4; FGRA4; complement factor I precursor; metalloproteinase-15 precursor; MDC3; T-lymphocyte surface antigen Ly-9 precursor; fibroblast growth factor-21; FGF-11; antilentoproteinase 1 precursor; battle polypeptide variant; antilenkoproteinase 1 precursor; lucial protein-like; beta-neoendorphin-dynorphin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-MAR-2004
                                                                                                                                                                  ADL57104;
                                                                                    RESULT 14
                                                                                                                           The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (S1). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | MetalaSerValdanSerThrCysAsnValThrLeuThrCysSerValGluLysGluGlu 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LysAsnValThrTyrAsnTrpSerProLeuGlyGluGluGlyAsnValLeuGlnIlePhe 160

cc are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases such as metabolic disorders, hainthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's (disease, Parkinson's disease, epilepsy, immune disorders, Alzheimer's cathma, and various dyslipidaemias. The nucleic acids and polypeptides casthma, and various dyslipidaemias. The nucleic acids and polypeptides corther modulate or inhibit es, on neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to Novx substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenemics. The Novx polypeptides of the invention show homology to certain known human proteins: NOV1a-1t show homology to fibroblast growth factor receptor 4 (FGFR4); NOV2a shows homology to fibroblast growth factor-21 (FGFR4); NOV2a shows homology to fibroblast growth factor-21 (FGFR4); NOV3a-91 show homology to antilenbugoroctinase 1 precursor; NOV3a-91 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-89 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-89 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-89 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-89 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-80 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-80 show homology to antilenbugoroctinase 1 colypeptide variant; NOV8a-80 shows homology to blow homology to antilenbugoroctinase 1 colypeptide varian

The invention relates to a novel isolated immune response associated protein (IRAP) comprising any of 35 fully defined sequences given in the specification. The polypeptide of the invention demonstrates antiatreriosclerotic, cytostatic, neuroprotective, antiparkinsonian, the patotropic, cerebroprotective, antiinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is useful for diagnosing a condition or disease associated with the expression of IRAP, such as arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease and Crohn's disease.

Trithermore, the molecules of the invention may be utilised during gene therapy procedures. The current sequence is that of a human IRAP cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated immune response associated proteins (IRAP) polypeptide and polymucleotide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SD;
                                                                                                                                immune response associated protein; IRAP; antiarteriosclerotic; cytostatic; neuroprotective; antiparkinsonian; hepatotropic; ecebbroprotective; antiinflammatory; nootropic; vasotropic; arteriosclerosis; cirrhosis; cancer; stroke; Alzheimer's disease; Parkinson's; Crohn's; gene therapy; human; 88; gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ,, Elliott VS, Hafalia AJA, Richardson

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT FILING DATE: 2000-41-4

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,756

PRIOR PLILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-00-10-03

PRIOR FILING DATE: 2000-00-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: Fasted for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 13.949-016-13198

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
